Equine Wound Care Spray
Antiseptic Plus Pain and Itch Relief

FEATURES AND BENEFITS

BARRIER CLEAR Equine Wound Care Spray:

- Is a 2% chlorhexidine gluconate formulation that is effective against gram-positive and gram-negative organisms. It is a broad spectrum topical disinfectant; it is virucidal, bactericidal and fungicidal.
  - The antiseptic nature of chlorhexidine applications can last up to 6 hours. Research has shown it is more effective in killing bacteria than both providone-iodine and saline.
- Contains 2% lidocaine to alleviate pain in wounds and surgical incisions. The onset of action is 3–5 minutes.
- Contains 1% Pramoxine hydrochloride, which is a topical anesthetic that provides temporary relief from itching and pain.
  - Pramoxine helps to provide rapid, temporary relief from pruritus due to dermatitis, abrasions, insect bites and minor skin irritations.
  - Peak local anesthetic effects occur within 3–5 minutes of application. It provides only temporary effects.
- Is a non-stinging and non-scented formulation, which dries in 2–3 minutes.
- Trigger sprayer included with each bottle.

INDICATIONS: For topical use on horses as an aid in preventing infection, pain and itching. Kills up to 99% of surface germs in 15 seconds or less that can potentially cause an infection.

ACTIVE INGREDIENTS

- Chlorhexidine Gluconate 2% w/v
- Lidocaine (equivalent to 2% w/v)
- Pramoxine (equivalent to 1% w/v)

PURPOSE

- Antiseptic
- Pain Relief
- Anti Itch

TAKE TIME

- OBSERVE LASER DIRECTIONS
